

Sangita Giri

Product & Transformation Leader

Toronto, Canada · [linkedin.com/in/sangitagiri01/](https://www.linkedin.com/in/sangitagiri01/) · sangitagiri29.github.io/whoami/

Portfolio summary generated from the website content. Full resume available on request.

20 years across software engineering, enterprise technology delivery, product management and transformation. I work where product strategy, data, technology and execution meet, turning customer and business problems into clear priorities, measurable outcomes and scalable products.

Capabilities: Product Strategy · Portfolio Leadership · Data-Driven Decisions · Enterprise Technology · AI-Enabled Product Development

EXPERIENCE

UPS

July 2025 – present

Product transformation & portfolio leadership

- I influence product strategy and roadmaps, partner with Product Managers and Product Owners on OKRs and prioritization, and guide portfolio and quarterly planning with capacity and dependency management across the pods. I bring product and operational KPIs into Power BI insights that Product, Engineering and business leaders use to decide, coach Product Managers, Product Owners, Scrum Masters and Release Train Engineers, and improve the product operating model. Decisions stay with the accountable product and business owners.
- One portfolio view of strategy, roadmaps, OKRs and capacity across five products and nineteen pods.
- Flow, throughput and predictability measured consistently across pods, so capacity and dependency conversations use the same evidence.
- PI and quarterly planning that surfaces cross-product dependencies early, so trade-offs are deliberate.
- Product and operational KPIs in Power BI used in leadership decision forums, not just status reviews.
- Stronger Product Manager and Product Owner practice through hands-on coaching on outcomes, prioritization and evidence.

TD Bank

2023 – July 2025

Enterprise product & program delivery

- As Product Manager I defined and prioritized the roadmap, ran quarterly and capacity planning, managed risks and dependencies and led release readiness. I built the Agile Maturity Index and the Power BI dashboards leadership used to see velocity, throughput, cycle time and predictability, and represented the product in senior governance forums.
- Delivered the Jenkins-to-Azure DevOps migration with pipeline stability and scalability treated as product outcomes.
- Roadmap and backlog prioritization tied to business goals, with cross-functional input gathered before commitments.
- Agile Maturity Index and automated Power BI reporting gave leadership a shared, near-real-time view and reduced manual reporting effort.
- Customer feedback built into iterative releases as a standing practice.

CGI

2022 – 2023

Large-scale program & Release Train leadership

- I led program execution: enterprise and PI planning, cross-team dependency and risk management, roadmap alignment with Product Management, and the metrics and information radiators that tracked flow and predictability. Coaching teams and leaders through the organizational change was part of the job, not a side activity.

- One planning cadence and dependency map across six or more teams, giving leadership an early, honest view of delivery risk.
- More predictable program commitments through explicit capacity planning and impediment resolution.
- Product roadmap and PI priorities aligned through a standing partnership with Product Management.
- Power BI forecasting and flow metrics adopted as the program's decision tools.

EARLIER CAREER

- **TCS**, Agile Delivery Manager (2020 – 2022). Large-scale Agile delivery across client programs: the step from project delivery into program and transformation leadership.
- **Cognizant**, Technical Project Manager (Nov 2016 – Dec 2019). Enterprise technology delivery: planning, execution and stakeholder management across delivery teams.
- **NTT DATA**, Agile Consultant (2014 – 2016). Guided enterprise teams through Agile adoption and aligned pods around shared goals.
- **Accenture (USA)**, Systems Analyst, State Farm (2012 – 2014). Systems analysis and enterprise Java delivery for the State Farm DSS program: REST APIs, reconciliation reporting, performance work.
- **Accenture (India)**, Senior Software Engineer (2007 – 2011). Java / J2EE engineering for Thomas Cook (payment and review workflows), UnitedHealth Group and Walgreens.

Technical foundation: Java, Spring, Hibernate and REST, 2007 to 2014.

EDUCATION

- **Product Management**, University of Toronto
- **B.Tech, Computer Science & Engineering**, Dr. A. P. J. Abdul Kalam Technical University

CERTIFICATIONS

- SAFe Program Consultant (SPC), Scaled Agile
- SAFe Release Train Engineer (RTE), Scaled Agile
- Certified ScrumMaster (CSM), Scrum Alliance
