

Sangita Giri

Product & Transformation Leader

Toronto, Canada · [linkedin.com/in/sangitagiri01/](https://www.linkedin.com/in/sangitagiri01/) · sangitagiri29.github.io/whoami/

Portfolio summary generated from the website content. Full resume available on request.

20 years across software engineering, enterprise technology delivery, product management and transformation. I work at the intersection of product strategy, data, technology and execution, helping teams turn customer and business problems into clear priorities, measurable outcomes and scalable products.

Capabilities: Product Strategy · Portfolio Leadership · Data-Driven Decisions · Enterprise Technology · AI-Enabled Product Development

EXPERIENCE

UPS

July 2025 – present

Product transformation & portfolio leadership

- I drive improvement of the product operating model across the portfolio. I influence product strategy and roadmaps, partner with Product Managers and Product Owners on OKRs, prioritization and measurable outcomes, guide portfolio and quarterly planning with capacity and dependency management across the nineteen pods, and coach Product Managers, Product Owners, Scrum Masters and Release Train Engineers. I work alongside Engineering and business leaders and give senior leadership the analysis behind portfolio decisions; the decisions themselves stay with the accountable product and business owners.
- A portfolio-level view of strategy, roadmaps, OKRs and capacity across five products and nineteen pods, replacing product-by-product planning.
- Flow, throughput and predictability measured consistently across pods, so capacity and dependency conversations use the same evidence.
- PI and quarterly planning that surfaces cross-product dependencies and constraints early, so trade-offs are made deliberately.
- Product KPIs and operational metrics in Power BI that senior leaders use in decision forums, not just status reviews.
- Stronger Product Manager and Product Owner practice through hands-on coaching on outcomes, prioritization and evidence.

TD Bank

2023 – July 2025

Enterprise product & program delivery

- As Product Manager I defined and prioritized the roadmap, ran quarterly planning and capacity planning, managed risks and dependencies, and led release readiness. I built the Agile Maturity Index and Power BI performance dashboards that leadership used to see velocity, throughput, cycle time and predictability, and I represented the product in senior governance forums.
- Delivered the Jenkins-to-Azure DevOps platform migration with pipeline stability and scalability treated as explicit product outcomes.
- Roadmap and backlog prioritization tied directly to business goals, with cross-functional input gathered before commitments were made.
- An Agile Maturity Index and automated Power BI reporting that gave leadership a shared, near-real-time view of team performance and reduced manual reporting effort.
- Customer feedback folded into iterative releases as a standing practice rather than a one-off exercise.

CGI

2022 – 2023

Large-scale program & Release Train leadership

- I led program execution as the Release Train Engineer: enterprise and PI planning, cross-team dependency and risk management, roadmap alignment with Product Management, and the metrics and information radiators that

tracked flow and predictability. The organizational transformation part of the role meant coaching teams and leaders through the change, not just running events.

- A shared planning cadence and dependency map across six or more teams, giving leadership an early and honest view of delivery risk.
- Improved predictability of program commitments through explicit capacity planning and impediment resolution.
- Product roadmap and PI priorities aligned through a standing partnership with Product Management.
- Power BI forecasting and flow metrics adopted as the program's decision-making tools.

EARLIER CAREER

- **TCS**, Agile Delivery Manager (2020 – 2022). Large-scale enterprise delivery: led Agile delivery across client programs, the step from project delivery into program and transformation leadership.
- **Cognizant**, Technical Project Manager (Nov 2016 – Dec 2019). Enterprise technology delivery: planning, execution and stakeholder management across delivery teams.
- **NTT DATA**, Agile Consultant (2014 – 2016). Guided enterprise teams through Agile adoption and aligned pods around shared goals.
- **Accenture (USA)**, Systems Analyst, State Farm (2012 – 2014). Systems analysis and enterprise Java delivery for the State Farm DSS program: REST APIs, reconciliation reporting and performance work.
- **Accenture (India)**, Senior Software Engineer (2007 – 2011). Java / J2EE engineering for clients including Thomas Cook (payment and review workflows), UnitedHealth Group and Walgreens.

Software engineering and systems analysis (Java, Spring, Hibernate, REST) from 2007 to 2014 are my technical foundation. It is why I can hold my own with architects and engineers on trade-offs, platform risk and delivery reality.

EDUCATION

- **Product Management**, University of Toronto
- **B.Tech, Computer Science & Engineering**, Dr. A. P. J. Abdul Kalam Technical University

CERTIFICATIONS

- SAFe Program Consultant (SPC), Scaled Agile
- SAFe Release Train Engineer (RTE), Scaled Agile
- Certified ScrumMaster (CSM), Scrum Alliance
- Level II Secret Clearance, Government of Canada
